GRAPHIC SYMBOLS

To differentiate the type and importance of the information in this User Manual, graphic reference symbols are used to make such information easier to interpret.

3.3

Indicates contents of sections, general instructions, notes, and other points to which the reader's attention needs to be called.

Indicates a particularly delicate situation that could affect

the safety or correct operation of the controller, or an

instruction that MUST be followed to prevent hazards.

Connector J1 outputs 5...10

Indicates a suggestion based on the experience of GEFRAN's Technical Personnel that could be especially useful under certain circumstances.

Indicates a reference to Detailed Technical Documents available on the GEFRAN website www. gefran.com.

Indicates a risk to the user's safety due to high voltage at the points indicated.

PRELIMINARY INSTRUCTIONS

The section contains general information and warnings to be read before installing, configuring and using the controller..

1.1 GENERAL DESCRIPTION

GFX4 is an extremely compact, independent unit for separate control of 4 zones, complete with communication interface in all popular fieldbus standards.

It offers an exclusive combination of performance, reliability, and flexibility. In particular, this new line of Gefran controllers is the ideal solution for sectors demanding high performance and continuity of service, such as:

- extrusion lines
- plastics injection presses
- thermoforming machines
- · packaging and packing machines
- etc.

Series GFX4 controllers are based on an extremely versatile hardware and software platform, with options to select the best I/O configuration for your system.

Attention: the description of programming and configuration parameters are contained in the "Programming and configuration" manual, downloadable from the website www.gefran.com

PRELIMINARY INSTRUCTION

1.2

Read the following preliminary instructions before installing and using the GFX4 modular power controller.

This will make start-up faster and avoid some problems that could be mistakenly interpreted as malfunctions or limitations of the controller.

Immediately after unpacking the unit, check the order code and the other data on the label attached to the outside of the container.

Write them on the following table.

(Serial Number)
(Product code)
(Order code)
(Type of electrical power supply)
(Firmware Version)

This data must always be available and given to Gefran Customer Care representatives if technical service is needed.

Check that the controller is in perfect condition, was not damaged during shipment, and that the package also contains the "Configuration and Programming" manual. Immediately report any errors, shortages, or signs of damage to your Gefran dealer. Check that the order code matches the configuration requested for the intended application by consulting the section: "Technical-Commercial Information."

Example:	GFX4	30 - D - 2 - F
Model Total controlled pow	ver 30KW	
Outputs 58 logic ty 4 current transforme		
Fuse holders preser	nt	

See paragraph 2.1 " Dimensions and mounting" before installing the GFX4 controller on the machine/host system control panel.

In case of PC configuration, make sure you have the WINSTRUM Kit.

For the order code, see Section 7 "Technical-Commercial Information".

Users and/or system integrators who want detailed information on serial communication between Gefran standard and/or industrial PCs and Gefran Programmable Instruments can access Technical Reference Documents on serial communication and MODBus protocol, etc., in Adobe Acrobat format on the Gefran website **www.gefran.com**:

- Serial Communication
- MODBus Protocol

Before calling Gefran Customer Care in case of assumed malfunctions, please see the Troubleshooting Guide in the "Maintenance" section and, if necessary, the F.A.Q. (Frequently Asked Questions) section on the Gefran website www.gefran.com

2 · INSTALLATION AND CONNECTION

This section contains the instructions needed for correct installation of GFX4 controllers on the machine/host system control panel and for correct connection of the power supply, inputs, outputs and interfaces.

CAREFULLY READ THE FOLLOWING WARNINGS BEFORE INSTALLING THE INSTRUMENT!

Disregard of such warnings could create electrical safety and electromagnetic compatibility problems, as well as void the warranty.

2.1 ELECTRICAL POWER SUPPLY

 the controller DOES NOT have an On/Off switch: the user must install a 2-phase switch/isolator conforming to safety requisites (CE mark) to cut off the power supply up-line of the controller.

The switch must be installed in the immediate vicinity of the controller in easy reach of the operator.

A single switch can be used for multiple controllers.

- if the controller is connected to devices that are NOT electrically isolated (for example, thermocouples), the ground connection must be made with a specific conductor and NOT via the machine structure.
- if the controller is used in applications with risk of harm to persons or damage to machines or materials, it MUST be equipped with auxiliary alarm devices.

It is advisable to provide the ability to check for tripped alarms during regular operation.

DO NOT install the controller in rooms with hazardous (inflammable or explosive) atmosphere; it may be connected to elements that operated in such atmosphere only by means of appropriate interfaces that conform to current safety standards.

2.2 NOTES ON ELECTRICAL SAFETY AND ELECTROMAGNETIC COMPATIBILITY:

2.2.1 CE MARK: EMC (electromagnetic compatibility) conformity

in compliance with Directive EMC 2004/108/CE.

Series GFX4 controllers are mainly intended for industrial use, installed on panels or control panels of production process machines or systems.

For purposes of electromagnetic compatibility, the most restrictive generic standards have been adopted, as shown on the table

2.2.2 LV (low voltage) conformity

in compliance with Directive 2006/95/CE

EMC conformity has been verified with the connections indicated on table 1.

Recommendations for Correct Installation for purposes of EMC

2.3 INSTRUMENT POWER SUPPLY

- The power supply for the electronic instrumentation on the panels must always come directly from a cut-off device with fuse for the instrument part.
- Electronic instrumentation and electromechanical power devices such as relays, contactors, solenoids, etc., MUST ALWAYS be powered by separate lines.
- When the power supply line of electronic instruments is heavily disturbed by switching of thyristor power groups or by motors, you should use an isolation transformer only for the controllers, grounding its sheathing.
- It is important for the system to be well-grounded:
 voltage between neutral and ground must not be > 1V
 Ohmic resistance must be < 6Ω;
- If the grid voltage is highly unstable, use a voltage stabilizer.
- In proximity of high-frequency generators or arc welders, use adequate grid filters.
- The power supply lines must be separate from instrument input and output lines.
- Supply from Class II or from limited energy source

2.4 INPUT AND OUTPUT CONNECTIONS

- · Connected outside circuits must be doubly isolated.
- To connect analog inputs, strain gauges, linears, (TC, RTD), you have to:

physically separate the input cables from those of the power supply, outputs, and power connections.
use braided and shielded cables, with sheathing grounded at a single point.

 To connect the control outputs and alarm outputs (contactors, solenoids, motors, fans, etc.), install RC (series of capacitors and resistors) groups parallel to inductive loads that work in AC.

(Note: all condensers must conform to VDE standards (class X2) and support voltage of at least 220Vac. Resistances must be at least 2W).

 Install a 1N4007 diode parallel to the coil of inductive loads that work in DC.

GEFRAN S.p.A. assumes no liability for any damage to persons or property deriving from tampering, from incorrect or improper use, or from any use not conforming to the characteristics of the controller and to the instructions in this User Manual.

Appropriate devices must be provided: fuses or automatic switches to protect power lines. The fuses present in the module function solely as a protection for the GFX4 semiconductors.

control and laboratory use		

ATTENTION

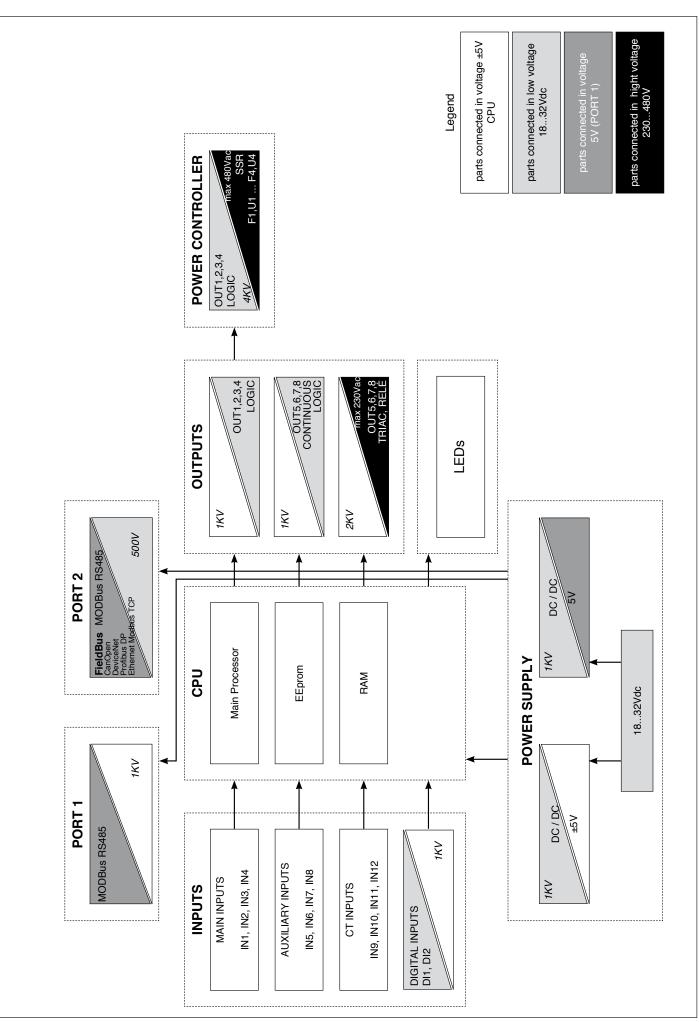

This product has been designed for class A equipment. Use of the product in domestic environments may cause radio interference, in which case the user may be required to employ additional mitigation methods.

WARNING

Conformity UL for SCCR (Short Circuit Current Rating) 100kA for models: GFX4 - XX - X - X - 0 - X

Suitable for use on a circuit capable of delivering not more than 100RMS kA symmetrical, 480VAC when protected only by listed cartridge fuses manufactured by BUSSMAN type DFJ200 non renewable (JDDZ) 200A class J current limiting fuses.

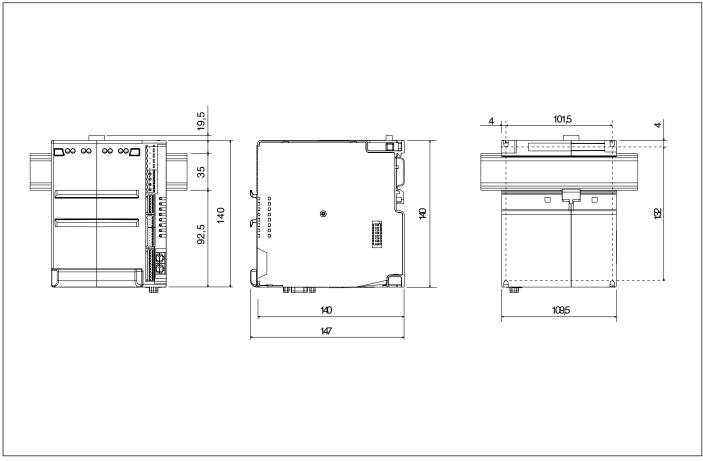

The Declaration of conformity CE is available on request

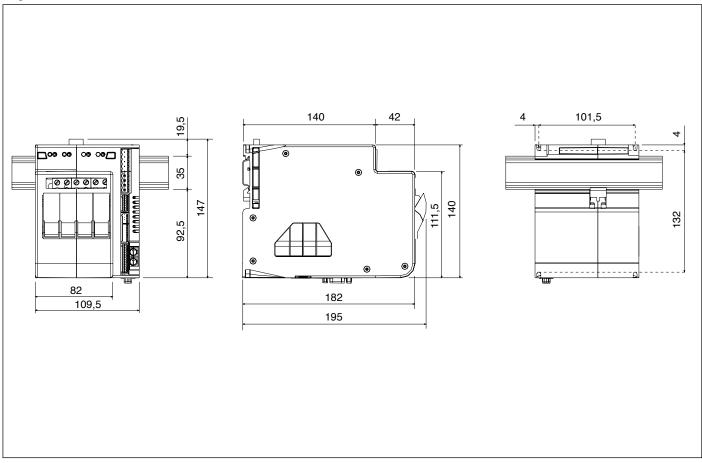

2.5 DIMENSIONS

Fastening may be done on DIN guide (EN50022) or with (5MA). See figures 1 and 2. All dimensions are expressed in mm.

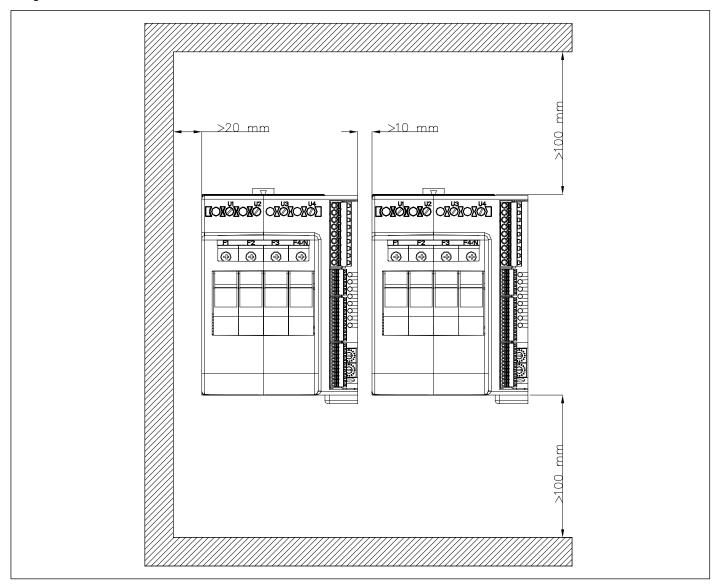

80395P_MHW_GFX4_10-2015_ENG

2.6 INSTALLATION

Attention: respect the minimum distances shown in figure 3 to provide adequate air circulation.

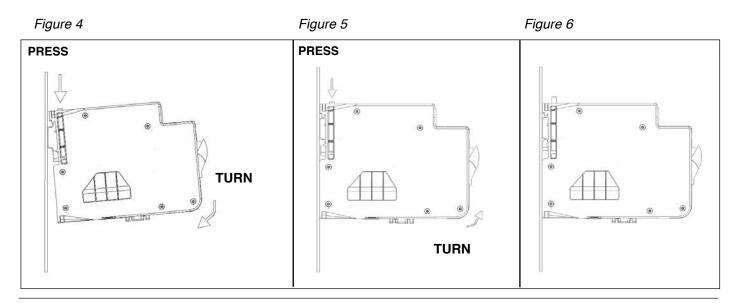

Figure 3

1

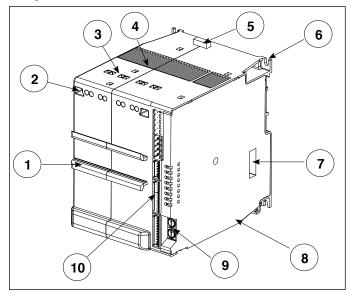

For correct attachment/release of the module on the DIN guide, do as follows:

- keep the attach/release cursor pressed
- insert/remove the module
- release the cursor

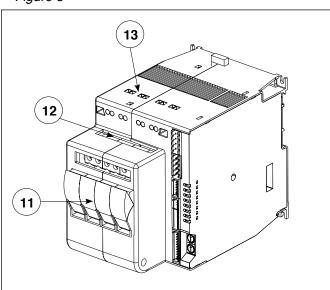

80395P_MHW_GFX4_10-2015_ENG

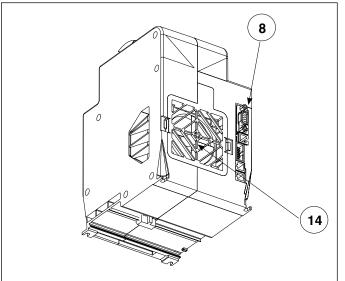

Figure 7

ventilation grill: DO NOT OBSTRUCT

- 6 screw seats for fastening module on plate
- 7 dip switches for function configuration
- 8 connectors for communication ports (Port1, Port2)
- **9** rotary switches for setting node address or number
- **10** signal and power supply connectors (J1, J2, J3, J4)

- 11 fuse holder (only for models 30KW and 60KW)
- 12 terminals for fuse holder connection (F1, F2, F3, F4)
- **13** terminals for load power connection (U1, U2, U3, U4)

14 ventilation air intake grill: DO NOT OBSTRUCT

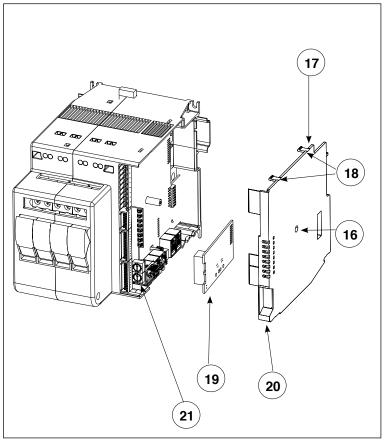

- 14 ventilation air intake grill
- **15** fan

Do as follows:

- a remove the fan grill
- **b** detach the connector
- c clean or replace the fan

2.9 INSERTING THE FIELD BUS INTERFACE BOARD

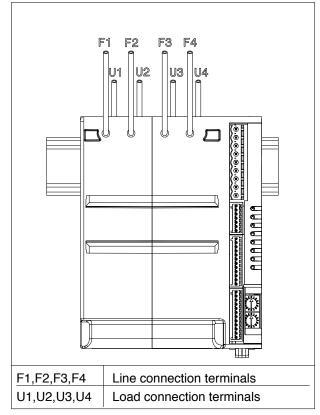

Do as follows::

- a Unscrew screw 16
- With a screwdriver, gently apply leverage at points 18
- c Remove cover 17
- d Place interface board 19 on the connectors on board 21
- e Remove pre-broken parts 20 on cover 17 based on the type of interface installed
- f Reposition cover 17 in its housing
- g Tighten screw 16

3.2 INPUT/OUTPUT CONNECTIONS

Use adequate compensated cable for thermocouple inputs. Respect polarity by avoiding junctions on the cables. If the thermocouple is grounded, the connection must be at a single point.

For resistance thermometer inputs, use copper extension cables. Resistance must not exceed 20 ohm; avoid junctions on the cables.

For 2-wire resistance thermometer, make the connection indicated instead of the third wire.

INSTALLATION OF "MODBUS" SERIAL NETWORK

A network typically has a Master that "manages" communication by means of "commands," and Slaves that carry out these commands.

GFX4 modules are considered Slaves to the network master, which is usually a supervision terminal or a PLC.

They are positively identified by means of a node address (ID) set on rotary switches (tens + units).

A maximum of 99 GFX4 modules can be installed in a serial network, with node address selectable from "01" to "99" in standard mode or can also create a network with GFX4 and Geflex mixed in Geflex compatible mode, in which each GFX4 identifies 4 zones with sequential node address starting with the code set on the rotary switches.

GFX4 modules have a ModBus serial (Serial 1) and, optionally (see order code) a Fieldbus serial (Serial 2) with one of the following protocols: Modbus RTU, Profibus DP, CANopen, DeviceNet e Ethernet Modbus TCP.

The MODBUS RTU port 1 has the follwing factory settings (default):

Parameter	Default	Range
ID	1	199
BaudRate	19,2Kbit/s	1,257,6kbit/s
Parity	None	parity/odd parity/none
StopBits	1	-
DataBits	8	-
-		

The following procedures are indispensable for the Modbus protocol.For the other protocols, see the specific Geflex manuals. The use of rotary switches (A...F) letters is for particular procedures described in the following paragraphs. Here are the tables showing them:

Procedure	Position rotary s	ons of switches	Description
	Tens	Units	
AutoBaud	0	0	It enables to set the
			correct BaudRate value
*AutoNode	А	0	It enables to transfer the
			correct node (ID) address
			(tens) to eventual
			GEFLEX S1/S2

Note: the AutoNode procedure is also required for Profibus DP, CANOpen, DeviceNet, Ethernet Modbus/TCP protocols. Check its correct address in the specific manuals in question

Function

Adapt the serial communication speed and parity of the GFX4 modules to the connected supervision terminal or PLC.

Green LED L1 "STATUS" mentioned in the procedure can vary its behavior based on parameter Ld.1, which is set to a default value of 16.

Procedure

1) Connect the serial cables for all modules on the network to serial 1 and to the supervision terminal.

2) Set the rotary switch on the GFX4 modules to be installed, or on all modules present in case of first installation, to position "0+0".

3) Check that the green "STATUS" LEDs flash at high frequency (10Hz).

4) The supervision terminal must transmit a series of generic "MODBUS" read messages to the network.

5) The procedure is over when all of the green L1 "STATUS" LEDs on the Geflex modules flash at a normal frequency (2Hz) (if parameter 197 Ld.1 = 16 as default).

The new speed parameter is saved permanently in each GFX4; therefore, the "AUTOBAUD SERIAL 1" sequence does not have to be run at subsequent power-ups.

When the rotary switch is turned, the green "STATUS" LED stays on steadily for about 6 seconds, after which it resumes normal operation and saves the address.

4.2 "AUTONODE PORT 1" sequence

Function

Assigning the GFX4/GFXTERMO4 node (ID) address ten to GEFLEX S1/S2.

The L1 "STATUS" green led mentioned in the procedure can vary its behaviour according to the Ld.1 parameter which is 16 as default.

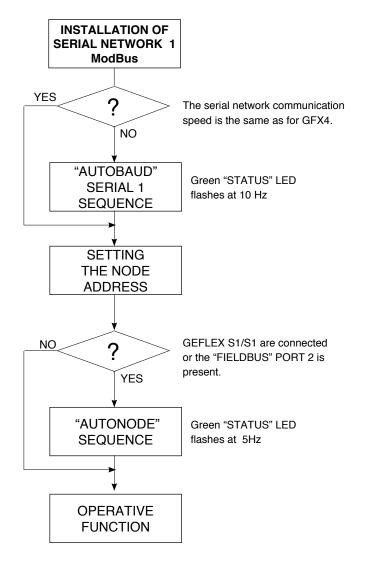

Procedure

1) Connect the serial cables to all the module in the serial 1 network, disconnect supervision or GFX-OP terminals.

2) Turn the rotary switches from the set node address to the position "A+0".

3) Check that the "STATUS" green led is blinking at an average frequency (5Hz) for 10 seconds and then that it returns to normal blinking (2Hz).

4) Turn the rotary switches in the position of the node address.

GENERAL DATA					
Power supply	24Vdc ±25%, max 8VA				
Indicators	Eight LEDs:				
	RN CPU in run state				
	ER fault signal				
	DI1, DI2 state of digital inputs				
	O1,,O4 state of outputs				
Protection	IP20				
Work/storage temperature	050°C (see dissipation curves) / -2070°C				
Relative Humidity	2085% Ur non-condensing				
Ambient work conditions	indoor use, altitude up to 2000m				
Installation	DIN RAIL EN50022 o pannello tramite viti				
Installation instructions	Installation category II, pollution level 2, double isolation				
	Maximum surrounding air temperature 50°C (for UL).				
	Open type equipment				
Weight					
models 30Kw, 60Kw, 80Kw	1200g.				
models 30Kw, 60Kw con fusibili	1600g.

COMMERCIAL INFO

This section contains information on order codes for I the Controller and its main accessories

As mentioned in the Preliminary Instructions in this User Manual, a correct reading of the Controller order code

	(GFX4		
Nominal Powe	r]		
30KW	30			
60KW	60			
80KW	80	1		
80KW]		
]		
Auxiliary Outpu] 		
Auxiliary Outpu Absent	ts]	 	
	ts0]	 	
Auxiliary Outpu Absent Relay	ts 0 R]		

(*) Available only for 30, 60kW power

immediately identifies the unit's hardware configuration. Therefore, you must always give the order code when contacting Gefran Customer Care for the solution to any problems.

GEFRAN spa reserves the right to make aesthetic or functional changes at any time and without notice.

6.1 ACCESSORIES KIT PC USB / RS485 or TTL Configuration/supervision kit for GFX by means of PC with USB (Windows environment).

GFX-OP

Operator terminal for in-field configuration of the entire Geflex line.

GEFRAN GFX-OP
SP
200
10 1 1 1000 1072 1001 1001
$\triangle \nabla (F)$
000

Two types of terminals: - for installation on Geflex heatsink or on DIN guide - for panel installation

ORDER CODE

Programming terminal for Geflex (installation on DIN guide or on heatsink), complete with cables for connection to Geflex (L = 0.2m) [Note: for other connection cable lengths, see the cable section in the accessori	GFX-OP-D les catalog]
Programming terminal for Geflex (panel installation) [Note: for connection cable, see the cable section in the accessories catalog]	GFX-OP-P
Kit consists of: power supply, PC <> GFX-OP-D connection cable (L=2 m), adapter for Geflex power supply	GFX-OP-K
